

NEWSFLASH

On Monday, May 4th, 2015, the team of Gussing Renewable Energy Thailand together with representatives of GRE's key partners in Thailand, Siam Cement Group, Metro Machinery Co., Ltd., Bangkok Industrial Gas Co., Ltd., Cofely (Thailand) Co., Ltd. and Nongbua Green Power Co., Ltd. had the honor to lay the foundation stone of the first GRE-Dual Fluidized Bed Gasification Power Plant in Thailand. The plant will be located north of the country's capital Bangkok in the province of Nakhon Sawan.

In their speeches both Mr. Michael Messner, Managing Director of Gussing Renewable Energy Thailand and Mr. Visut Chongcharoenkit, Energy Director of SCG, expressed their confidence in the project which will demonstrate GRE's technology and generate 1MW_{el} output to be fed to the national grid from renewable energy sources such as various forms of Biomass and also Refused Derived Fuel (RDF) and segregated Municipal Solid Waste (MSW). Together GRE and SCG want to develop the Thai and neighboring market for the GRE-DFB Gasification process.

Beside SCG this prestigious project also attracted additional national market leaders such as Metro Machinery (MMC) and Bangkok Industrial Gas (BIG). MMC is the sole distributor for Caterpillar Gas Engines and other equipment in Thailand and will of course be the supplier of the Gas Engine required to turn the high quality GRE gas into Electricity. BIG will work with GRE in a R&D side-project on how to separate valuable Hydrogen from the Syngas stream as well as look for other potentials in Gas generation and separation. Another partner is Cofely, a daughter company of Gas de France-Suez, which is specialized in Operation and Maintenance of Power Plants and other industrial and commercial installations.

The GRE-DFB plant in Thailand is due for commissioning beginning of 2016 and will then perform its duty reliably as a community Power Plant bringing wealth to the region and provide quality jobs.
